

Problem

The wildcard characters have the following meanings: * can match zero or more characters. ? can match exactly one character. Any other character in the pattern must match the corresponding character in the input string exactly. Print 1 if the input string matches the pattern; otherwise, print 0.

Input Format

The input consists of two lines:

The first line contains the input string. The second line contains the pattern string.

Constraints

$1 \leq \text{length of string} \leq 10^5$ $1 \leq \text{length of pattern} \leq 10^5$ The string contains English letters and digits. The pattern contains English letters, digits, *, and ?.

Output Format

Print:

1 if the input string matches the pattern. 0 if the input string does not match the pattern.

Sample Input 0

```
abcabcccdacd
abcabcccdac*d
```

Sample Output 0

1

Sample Input 1

```
abcabcccd
a?c*c
```

Sample Output 1

0

Theme

Language Python 3

```
2 s = input().strip()
3 p = input().strip()
4 i,j=0
5 star = -1
6 match = 0
7 while i < len(s):
8     if j < len(p) and (p[j] == s[i] or p[j] ==
9         i += 1
10        j += 1
11    elif j < len(p) and p[j] == '*':
12        star = j
13        match = i
14        j += 1
15    elif star != -1:
16        j = star + 1
17        match += 1
18        i = match
19    else:
20        print(0) break
21 else:
22     while j < len(p) and p[j] == '*':
23         j += 1
24     if j == len(p):
25         print(1)
26     else: print(0)
```
