852. Peak Index in a Mountain Array

Solved

Medium [Topics](#) [Lock](#)

You are given an integer **mountain** array `arr` of length `n` where the values increase to a **peak element** and then decrease.

Return the index of the peak element.

Your task is to solve it in $O(\log(n))$ time complexity.

Example 1:

Input: `arr = [0,1,0]`

Output: 1

Example 2:

Input: `arr = [0,2,1,0]`

Code

Python3 Auto

```
1 class Solution:
2     def peakIndexInMountainArray(self, arr):
3         low=0
4         high=len(arr)-1
5         while low<high:
6             mid=(low+high)//2
7             if arr[mid]<arr[mid+1]:
8                 low=mid+1
9             else:
10                 high=mid
11         return low
```
