

Problem

The merged array should also be sorted in non-decreasing order. Complete the function mergeSortedArrays that takes the following parameters:

int arr1[n]: the first sorted array
int arr2[m]: the second sorted array
Returns int[]: the merged sorted array

Input Format

The first line contains an integer n, the size of the first array.

The second line contains n space-separated integers representing the first sorted array. The third line contains an integer m, the size of the second array. The fourth line contains m space-separated integers representing the second sorted array.

Constraints

$1 \leq n, m \leq 10^5$ $-10^9 \leq arr1[i], arr2[i] \leq 10^9$ Both arrays are sorted in non-decreasing order.

Output Format

Print the merged sorted array as space-separated integers.
