

Problem

Given an integer array of size n , find the majority element. A majority element is an element that appears more than $\lfloor n/2 \rfloor$ times.

If a majority element exists, print it. Otherwise, print -1.

Complete the function `majorityElement` that takes the following parameter:

`int arr[n]`: an array of integers Returns `int`: the majority element if it exists; otherwise -1.

Submissions

Input Format

The first line contains an integer n , the number of elements in the array. The second line contains n space-separated integers.

Constraints

$1 \leq n \leq 10^5$ $-10^9 \leq arr[i] \leq 10^9$

Output Format

Print the majority element if it exists; otherwise, print -1.

```
1 # Enter your code here. Read input from STDIN.
2 def majority_elements(arr:list[int])>int:
3     count=1
4     arr.sort()
5     for i in range(len(arr)-1):
6         if arr[i]==arr[i+1]:
7             count+=1
8         else:
9             count=1
10            if count>len(arr)//2:
11                return arr[i]
12    return -1
13 n=int(input())
14 arr=list(map(int,input().split()))
15 print(majority_elements(arr))
```
